

Ortho-K Eye Drops Thick and Thin

Professional Quality -Only Available Via Doctors

The leading challenges for contact lens patient compliance are dry eye, allergy, foreign body sensation and inflammation.

Now you have the tools to improve your results, to increase the number of patients qualifying for Ortho-K and to retain them as happy, comfortable and compliant patients.

These drops contain powerful ingredients to stimulate tear film production, counteract irritation, halt allergies and reduce foreign body sensation. Homeopathic Calendula is known to support corneal health and is indicated for corneal abrasions and erosions. The "Thick Drop" reduces mechanical irritation. The clarifying "Thin Eye Drop" is preservative free and used as often as needed to alleviate dry, red, itchy, irritated eyes and is also OK with soft contacts. Homeopathic drops are safe for children and nursing/pregnant women.

Directions:

Ortho-K Thick Drops: Instill one drop on the inside of the lens prior to insertion, and if desired, one drop on top of the lens after insertion. Or follow your doctor's recommendation.

Ortho-K Thin Drops: Instill one or two drops in the affected eye(s) upon waking to facilitate lens removal. Use as often as needed throughout the day to alleviate dryness, redness or discomfort.

Size:

Ortho-K Thick Drops: 15 ml

Ortho-K Thin Drops: 15 ml

Active Ingredients:
